What's New In?

When you first run Charles for the first time, you will be asked to identify which type of traffic to monitor: this is the SSL traffic or the HTTP traffic. You have to select one or the other, but not both. This is because Charles autoconfiguration works at the proxy level, meaning that all the outgoing and incoming traffic from the proxy is routed through Charles. A: When I have had performance problems I always start by turning on the recording feature. It can tell you when it is slow, and a bit of investigation can often point you to the cause. If you're running Windows, try running the proxy from Sysinternals.
