Octane Render 4 Crack R2 Plugin Cinema 4D .1. Field of the Invention The present invention relates to a multi-mode mobile terminal, and more particularly, to a multi-mode mobile terminal capable of minimizing interference between a multi-mode, and an antenna terminal and a data terminal when a data communication is performed through an antenna terminal, while performing a voice communication through the antenna terminal and the data terminal. 2. Description of the Related Art At present, multi-mode mobile terminals are enabled to perform voice and data communications using the same terminal, i.e. a dual-mode mobile terminal. The dual-mode mobile terminal usually includes an antenna port for voice communication and a data port for data communication, and is capable of operating in a normal mode to perform a voice communication and in a data communication mode to perform a data communication. The dual-mode mobile terminal receives or transmits signals through only one of the antenna port or the data port, such that an interference occurs between the voice

communication and the data communication when performing the dual-mode communication. For example, when the dual-mode mobile terminal performs the voice communication through the antenna port and the data communication through the data port, an interference may occur due to a difference in transmission timing between the voice communication and the data communication. Also, the dual-mode mobile terminal may include a plurality of antenna terminals, such that the voice communication may be performed through each of the antenna terminals and each of the data communication
